

What is claimed is:

1. An electronic information delivery system for
delivering electronic information to a plurality of users,
5 comprising:

an information database for storing the electronic
information to be acquired;

a selection information storing portion for storing
selection information for each user, the information being
10 used for selecting necessary information from the
electronic information;

an editing portion for searching and editing
information necessary for each user using the selection
information from the information stored in the information
15 database;

a user-edited information storing portion for storing
the edited information for each user; and

a transmitting portion for transmitting the information
stored in the user-edited information storing portion to
20 each user via a network.

2. The electronic information delivery system
according to claim 1, wherein means for assigning a keyword
to the electronic information to be stored in the
information database are provided, the selection
25 information includes a keyword selected by the user, and
the editing portion searches and edits necessary
information from the information stored in the information
database in accordance with the keyword included in the
selection information.

30 3. An electronic information delivery system for

delivering newspaper information that is published by a plurality of publishers to a plurality of users, comprising:

5 a newspaper database for storing published newspaper information;

a selection information storing portion for storing selection information for each user, the information being used for selecting necessary newspaper information from the newspaper information;

10 an editing portion for searching and editing newspaper information necessary for each user using the selection information from the newspaper information stored in the newspaper database;

15 a user-edited information storing portion for storing the edited newspaper information for each user; and

a transmitting portion for transmitting the newspaper information stored in the user-edited information storing portion to each user via a network.

4. The electronic information delivery system
20 according to claim 3, wherein the selection information includes publisher information that is used for selecting a publisher and page information that is used for selecting a newspaper page, and the editing portion is structured to edit necessary newspaper information for each of the page
25 information.

5. The electronic information delivery system
according to claim 4, wherein means for assigning a keyword to the newspaper information to be stored in the newspaper database are provided, the selection information includes a
30 keyword selected by the user, and the editing portion

searches necessary newspaper information from the newspaper information stored in the newspaper database in accordance with the keyword included in the selection information and edits the searched newspaper information as clipping
5 information that is different from each page information that was edited for each of the page information.

6. The electronic information delivery system according to claim 3, wherein a bulletin database for storing bulletin information that is published by the
10 publisher, the newspaper information is transmitted to a user twice at predetermined times in the morning and in the evening of the current day, and newly-published bulletin information is transmitted to a user without delay.

7. An electronic information delivery system for
15 delivering newspaper information that is published by a plurality of publishers to a plurality of users, comprising:

a newspaper information host system; including
a newspaper database for storing published
20 newspaper information,
a selection information storing portion for storing selection information for each user, the information being used for selecting necessary newspaper information from the newspaper information,

25 an editing portion for searching and editing newspaper information necessary for each user from the newspaper information stored in the newspaper database using the selection information,

a user-edited information storing portion for
30 storing the edited newspaper information for each user, and

a transmitting portion for transmitting the newspaper information stored in the user-edited information storing portion to each user terminal via a network; and

a plurality of user terminals provided in each user
5 being connected with the newspaper information host system via the network, each of the user terminals including

a memory device for storing newspaper information received from the newspaper information host system, and

a display device for displaying the newspaper
10 information stored in the memory device.

8. The electronic information delivery system according to claim 7, wherein the display device of the user terminal displays the newspaper information for each page, and the display device displays a message indicating
15 that a new bulletin information is received.

9. A computer program that is executed by a computer so as to realize an electronic information delivery system for delivering newspaper information that is published by a publisher to a plurality of users, process of the program
20 comprising the steps of:

storing the published newspaper information in a newspaper database;

storing selection information that is used for selecting necessary newspaper information from the
25 newspaper information in a selection information storing portion for each user;

searching and editing newspaper information necessary for each user from the newspaper information stored in the newspaper database using the selection information;

30 storing the edited newspaper information in a user-

edited information storing portion for each user; and
transmitting the newspaper information stored in the
user-edited information storing portion to each user via a
network.

- 5 10. A computer-readable medium storing the computer
program according to claim 9.
